

React Native Developer Job Description

Looklive is the leading platform that helps you shop what your favorite celebrity or influencer is wearing. You can buy the exact item, or the more affordable option. Looklive empowers people to shop the world's biggest cultural moments. We believe that by blending content and commerce, you give people a more seamless, fun, shopping experience.

Given Looklive's extraordinary growth, our backend team faces a variety of challenges ranging from API development to platform engineering. If you want to start fast and take on problems like these with a high degree of independence, then we want to talk to you.

About Our Tech Stack:

- Looklive's backend is built on Python
- Web Framework: Flask
- Web domain hosted on AWS
- Our applet is built on React.
- Data Storage: Postgres, Redis, Memcached, Elasticsearch
- Image/CDN: Thumbor, Varnish, Nginx

What We're Looking For:

- Software development and mobile app development experience.
- Work on React Native on the front end to create Android/iOS Apps.
- Thorough understanding of React Native and its core principles.
- Strong Proficiency in JavaScript, including DOM manipulation and the Javascript object model
- Experience with popular React workflows (such as Flux and Redux)
- Familiarity with RESTful APIs
- Experience creating, optimizing, and integration Application Programming Interface (API) calls; background in API development preferred.
- Create Technical Requirements Documentation based on Product Requirements Documents.
- Build high-level user interfaces using rapid prototyping methodologies.
- Design application frameworks for use across multiple products.
- Work with internal technical teams to identify and build platform elements required to support key mobile product features.
